

Composition of the Technical Advisory Board

In the edacentrum e.V. technical advisory board, a network of leading industrial companies and research institutions works closely together and performs a number of important strategic tasks. In addition, the advisory board provides valuable support for the EDA projects supervised by edacentrum. Further information on the tasks and services of the advisory board.

Steering Committee becomes "Technical Advisory Board"

To consider the changed constraints of edacentrum, the Steering Committee has been renamed to "Technical Advisory Board" at the general meeting of the edacentrum association on 12/17/2013. This has been done because of the recommendation of the edacentrum supervisory board. The necessary change of the statutes has been decided.
